

Bulletin Number: CO_IB_7/31/20	Distribution Date: 7/31/20	Effective Date: 7/31/20
Contact Point: Metric® Support	Subject: Rate Limiting Update	
Reason: Metric is providing an update on the most recent release regarding rate limiting		

Greetings Metric Users,

As previously noted in Industry Bulletin CO_IB_7/14/20, Metric will begin gradually implementing rate limiting on our API. As you may recall, rate limiting caps the number of API calls a third-party integrator (TPI) can make in a given amount of time to ensure no single user or company can overwhelm the system.

Metric is putting rate limiting functionality into production today to monitor API calls, but rate limits will be turned off. Metric will then implement three gradually decreasing rate limits over the next 90 days; we will provide two weeks' notice to TPIs prior to each rate limit going live.

Below is our approach to rate limiting. We will send additional detail as we learn more from our monitoring.

- Metric will limit:
 - The number of calls each integrator can make in a given amount of time,
 - The number of calls per facility each integrator can make in a given amount of time, and
 - The number of concurrent calls each integrator can make.
- Some states may have different rate limits based on TPI needs for calls into the API. However, all of the TPIs in a given state will have the same rate limits.
- Rate limits only apply to "GET" calls and do not include "PUT," "POST," or "DELETE" calls in the API.

Below is the general schedule for rate limit implementation; it is designed to give TPIs ample time to make any necessary changes and adopt best practices.

1. Metric will enable rate limits in a monitoring-only mode to help define the initial rate limit and assess the potential impact to TPIs. While the majority of TPIs shouldn't be affected by the initial limit, we will notify any TPIs likely to be impacted by it during this time.
2. Metric will announce the initial rate limit two weeks prior to it going live. We will then monitor API calls to assess impact and define the next limit.
3. Metric will announce the second rate limit two weeks prior to it going live; this new limit will be lower than the first. We will then monitor API calls to assess impact and define the final limit.
4. Metric will announce the final rate limit two weeks prior to it going live; this new limit will be lower than the second. We will continue to monitor API calls to assess impact.

This enhancement will make Metric easier to use, and we are being deliberate in our gradual approach to minimize the impact to TPIs and their customers. Ultimately, it will result in a faster, more responsive,

Metrc Support Bulletin

and more equitable system for third-party integrators. If you have any questions, please reach out to api-info@metrc.com.
